Peers to review

Now that you've learned about summarizing information with data visualization and handling missing data with imputation, it's time to apply these skills to a real-world case.

Discussions

With the summary and dataset from the previous section (Getting Started with the Case Study), your first challenge is to:

- Investigate the extent and nature of the missing data
- Design and implement an imputation technique for the missing data
- Produce a visualization for AAVAIL stakeholders on the US and Singapore markets using your modified dataset
