

# Who should take this course?

Data Science practitioners that have some foundation and some expertise building ML models.

This course will expand from the knowledge that you already have into more specific AI use cases beyond machine learning. There will be a focus on the decision process you use to build your pipeline and an additional focus on the specifics of enterprise implementations.

***You may want to ask yourself the following questions:***

- 1. You know how to implement ML solutions in your current position, but can you connect that work to enterprise requirements and business priorities?*
- 2. You know how to work with machine learning models and AI, but do you understand everything needed to implement an enterprise solution?*

Also seasoned data scientists who are resourceful enough to solve problems and learn a fair amount along the way, but they have never had formal training would benefit. If you have not already taken it.

**Seasoned data scientists who want formal training on applying AI in large enterprises.**

You are resourceful enough to solve problems and have learned a fair amount along the way, but you have never had formal training. If this is the case, you will definitely benefit from this course.
